PhD position (TVL13/2)

We offer a PhD position (salary TVL13 50%) at the Institute for Molecular Medicine and Cell Research.

We are investigating the regulation of programmed cell death by serine/threonine kinase signaling. In particular, we are interested in the relevance of these signaling pathways for immune regulation.

The regulation of the BCL-2 proteins PUMA and MCL-1 as well as the modulation of p53-induced apoptosis will be the main the focus of the project.

We offer exciting research in a highly motivated team, dedicated support and training by the group leader and an experienced postdoc, and we expect a high degree of motivation as well as readiness to work and think autonomously.

The project is covered by the Deutsche Forschungsgemeinschaft for three years.
